

Weekly Progress Report - Week 02

Name: Somya Darshini Panda

Project: Exploratory Data Analysis (EDA) on the Geldium Dataset

Reporting Period: Week 02

Tasks Completed

Performed data cleaning by handling missing values and duplicate records. Standardized column names and verified data types. Conducted exploratory data analysis using Python libraries such as Pandas, NumPy, Matplotlib, and Seaborn. Generated summary statistics and visualizations to understand feature distributions. Identified trends, correlations, and potential outliers in the dataset. Documented observations for future model development.

Milestones Achieved

Prepared a clean dataset ready for analysis. Completed initial EDA with charts and statistical insights. Established a workflow for further feature engineering and modeling.

Challenges and Hurdles

Some dataset fields contained missing values and inconsistent formats, making analysis difficult. A few visualizations required additional preprocessing before meaningful patterns became visible. These issues were addressed through data cleaning, type conversion, and validation of the processed data.

Lessons Learned

This week improved my understanding of data preprocessing, exploratory data analysis, and visualization techniques. I learned the importance of cleaning data before analysis and strengthened my problem-solving skills while working with real-world datasets.

Plan for Next Week

Perform feature engineering. Build baseline machine learning models. Evaluate model performance and document findings.
