

Weekly Progress Report - Week 04

Name: Somya Darshini Panda

Project: Community Hero (Django Web Application)

Reporting Week: Week-04

1. Work Completed

Improved the Community Hero Django project structure. Worked on issue reporting, dashboard, and issue detail pages. Integrated AI analysis fields (AI category, severity, confidence, and summary) into the Issue model. Updated templates to display AI analysis results. Tested application features and verified page navigation. Reviewed project files and prepared documentation for project progress.

2. Milestones Achieved

Successfully integrated AI-related fields into the project. Enhanced the user interface for displaying issue information. Completed testing of major project modules and identified remaining issues.

3. Challenges and Hurdles

During development, I encountered migration errors, model import issues, and template rendering problems. Some AI analysis fields were not displaying correctly because of missing data and configuration issues. I carefully reviewed the code, checked Django models, corrected imports, updated migrations, and tested each module step by step to resolve these problems.

4. Lessons Learned

This week's work improved my understanding of Django models, migrations, debugging techniques, template integration, and project organization. I learned how to identify errors from traceback messages, solve import and migration conflicts, and integrate new features into an existing web application in a structured manner.

5. Plan for Next Week

Complete remaining bug fixes. Improve AI prediction accuracy and interface. Perform final testing of all modules. Prepare the project for final demonstration and documentation.
